## 6X 100% Natural Fertiliser

Confused by the endless number of fertilisers, composts and dressings on the market? There is a simple answer that contains all your needs in one bag for everything that grows in your garden – including the lawn.

**6X 100% Natural Fertiliser** is just that – traditional chicken fertiliser but concentrated so that one sack is equivalent to six sacks of farm manure – for exceptional value.

You spend so much on buying healthy plants that it makes sense to continue to look after them when they are planted in your garden.

## Soil condition

The condition of your soil is a key factor in achieving spectacular results. **6X** contains all the nutrients and trace elements that plants require – plus the fibrous, organic, content needed to ‘condition’ the soil.

If your soil is heavy, **6x** will open it up to avoid waterlogging – if your soil is light and ‘blow away’, **6X** will hold the moisture and add ‘bulk’ to stabilise it. So it promotes healthy growth and good root development, proper drainage and the activity of earthworms.

Gardeners have been using traditional, fibrous, **6X 100% Natural Fertiliser** for over 50 years and, because it has a neutral pH balance its great for all plants. Composted, oven sterilised to eradicate pathogens and weeds, it comes in 15kg sacks, which treat up to a bumper 184sq metres (220sq yds).

**Analysis: Nitrogen (N) 5.8%, Phosphorous (P) 3.5%, Potassium (K) 3% – pH 6.8**

## 6X Easy Spread Pellets

The **6X Easy Spread Pellets** have all the advantages of the ‘traditional’ **6X Fertiliser**. Their modern pelleted format makes them so easy to spread and they are ‘odourless’ too – making it possible to use them close to the house in patio planters and conservatories. The pellets are also ideal in a spreader for lawns.

Two pack sizes are available: an 8kg bucket which treats up to 90sq metres (110sq yds) and a 20kg sack which treats up to 264sq metres (320sq yds).

## How do I use it?

You can spend so much time planning and maintaining your garden. **6X** helps you to make sure you receive the maximum return for your hard work. That’s why it makes sense to give regular application to all your plants – annuals, perennials, shrubs, roses, trees, hedges – in fact everything you grow! For example, with roses just sprinkle one or two handfuls around each bush when planting and with established plants give a good handful at pruning time and when the buds begin to swell.

You can even mix **6X** with potting or ericaceous compost for use with camellias, azaleas and other lime haters and being odourless, you can incorporate a handful mixed into each bucket of planting medium for all your hanging baskets and patio planters. Top up with another sprinkle of pellets every 3-4 weeks throughout the growing season.

**Analysis: Nitrogen (N) 5%, Phosphorous (P) 3.3%, Potassium (K) 2.2% – pH 6.5-7.0**

## Bumper crops of vegetables

Using either **6X Natural Fertiliser** or **6X Easy Spread Pellets**, sprinkle a double handful per square metre and lightly fork into the top 3-6cm of soil prior to planting and top dress again throughout the season, particularly with 'hungry feeders' such as peas, beans and brassicas.

## Do I need to take any precautions?

Plants can only take up nourishment in liquid form through their roots. Therefore, as with all fertilisers it is essential to always water well after application.

If you are allergic to chickens or feathers, avoid directly handling **6X** or breathing the dust. Some pets may be attracted to eat **6X** and, whilst this should not cause a problem, it is recommended that it should be discouraged.
